Promising Developments
in Edtech for Science

July 2016

newschools
venture fund

The NewSchools Ignite Team prepared this report to share findings on science education and lessons learned from launching the **Science Learning Challenge**.

newschoolsignite is a six-month virtual accelerator program that catalyzes product growth in market gaps important to teachers and students, and where innovation is lagging.

NewSchools Venture Fund is a national nonprofit venture philanthropy working to reimagine public education. NewSchools has three investment strategies, with Ignite being part of the Tools & Services strategy.

| Innovative Schools	Tools & Services	Diverse Leaders
Launch or redesign innovative district and charter schools	Support for-profit and nonprofits through market gap challenges and direct investments	Increase Black and Latino founders and CEOs, senior leadership, and board members

Overview

Part I:
Why science matters

Part II:
Challenges in K-12 science learning

Part III:
Opportunities for edtech to support science learning

Part I: Why Science Matters

Science is an integral part of everyday life that unlocks future career paths for students

"The whole of science is nothing more than a refinement of everyday thinking."

-Albert Einstein

newschools
v e n t u r e   f u n d

Science learning can spark endless career possibilities for students and build critical skills

Doctor   Physicist   Programmer   Teacher   Newscaster   Painter   Pharmacist

Banker   Pilot   Engineer   Chemist   Musician

Building science-related skills

Attention to detail	Technical skills
Analytical skills	Calculations, measurements

Building behavioral skills that support science learning
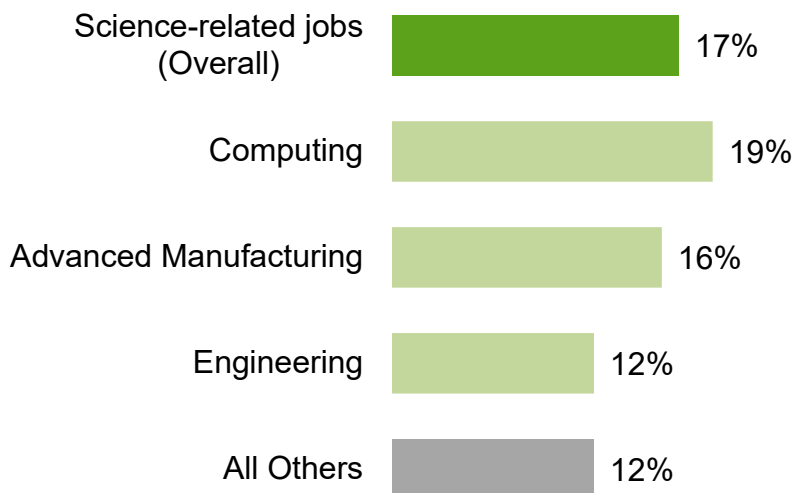

| Creative abilities	Organization skills
Communication & cooperation skills	Leadership skills

Science-related fields have some of the fastest growing jobs, and offer substantial earning potential

U.S. job growth, 2014-2024

- Science-related jobs (Overall): **17%**
- Computing: **19%**
- Advanced Manufacturing: **16%**
- Engineering: **12%**
- All Others: **12%**

Earnings are higher with science degrees

+65%

Science-related **Bachelor's Degree**

Non-science related **Graduate Degree**

There are more science-related jobs than candidates in the U.S.

For every 10 job posts…

there are only ~5 qualified science-related candidates

5

By 2018, there could be **2.4M unfilled science-related jobs**

there are 36 overall qualified candidates

36

Black and Latino workforce is growing, but increasingly underrepresented in science-related jobs

Black and Latino workforce as percentage of jobs
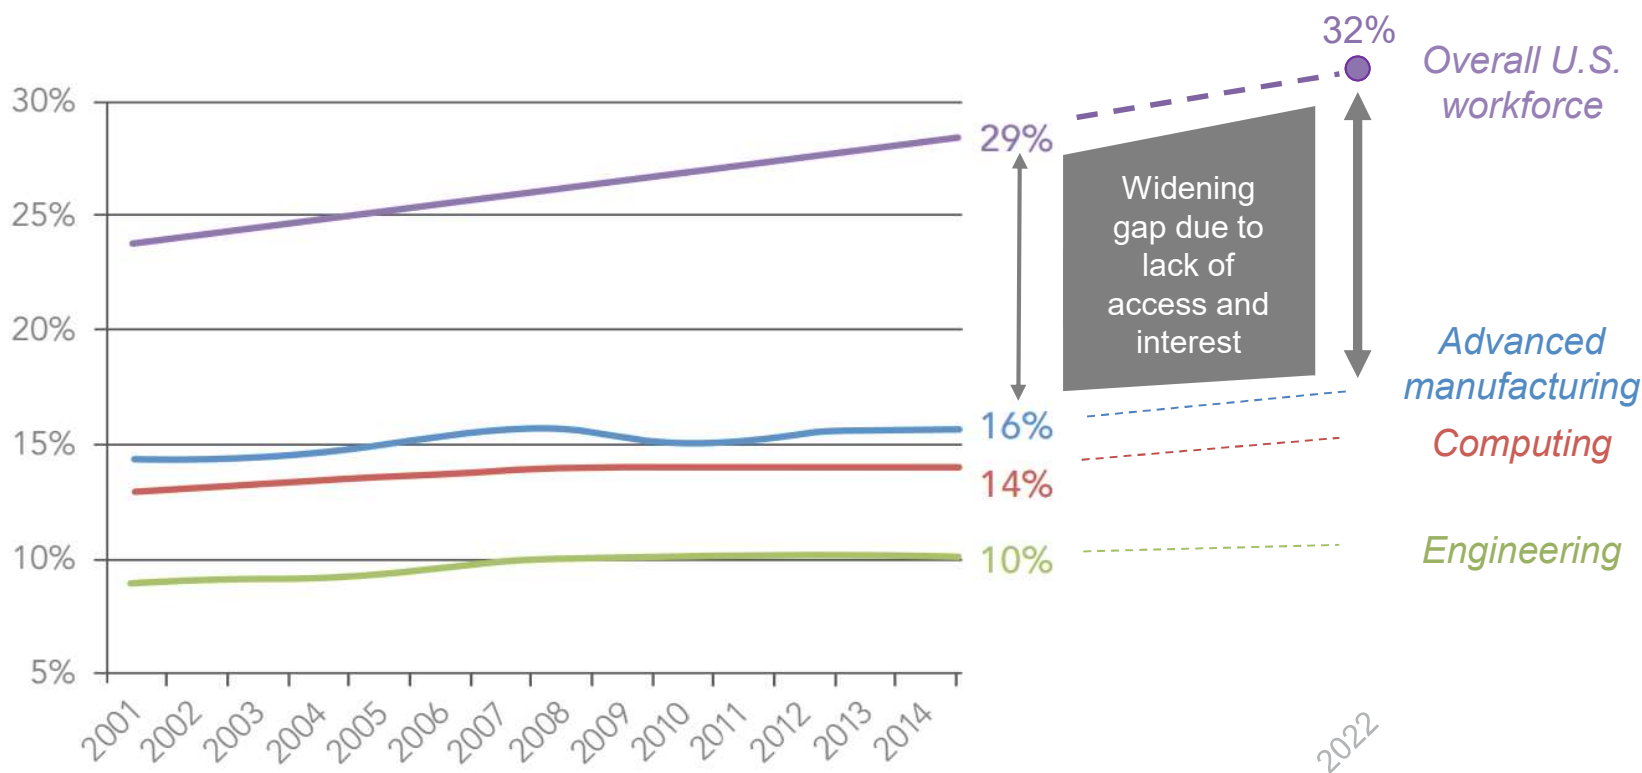

Sample science-related jobs, not comprehensive

Promising Developments in Science Edtech   July 2016   8

newschools venture fund

Growing emphasis on science education

Many of today's jobs and those in the future require science-related skills. Technology has accelerated this need.

Today's challenges require more complex analyses and science-based solutions. Global competitiveness is fueled by innovation, with science at its core.

Science literacy skills are currently not taught in an engaging way. This requires a shift towards hands-on, inquiry-based experiences from an early age.

Key Takeaways

1 Science education is an essential foundation

2 Science-related jobs are in high demand, without enough qualified candidates to fill them

3 While the Black and Latino workforce is growing, they are underrepresented in science-related careers

4 There is a greater focus on science education due to macroeconomic and societal factors

# Part II: Challenges in K-12 Science Learning

Students are struggling to gain science mastery, and teachers need better resources to support science learning.

"The science fair projects of today could become the products or businesses of tomorrow."

-President Barack Obama

Studies show student interest in science begins to decline as early as 4th grade

Interest in science over time by students

Elementary

Baseline

Students in K-3 interested in science

4th graders' interest in science

8th graders' interest in science

↓ 1/3

↓ 1/2

Among students originally interested in science, one-third lose interest by 4th grade and one-half by 8th grade.

Science education is failing to teach more than two-thirds of middle school students

NAEP science scores for 8th graders, 2011

Middle School

2%

35%

30%

33%

- Below Basic
- At Basic
- Proficient
- Advanced
National Assessment of Educational Progress (NAEP) is the largest nationally representative and continuing assessment of what America's students know and can do in various subject areas.

America's position as the world's innovation hub is being challenged

**Global PISA science scores among 15-year-olds in select countries, 2012**

Early High School

Score is significantly higher than U.S.

#1 *Shanghai-China (580)*

#2 *Hong Kong-China (555)*

#10 *Canada (525)*

#20 *Slovenia (514)*

Score is not significantly different from U.S.

#28 *U.S. (497)*

#30 *Latvia (502)*

#40 *Slovakia (471)*

#50 *Cyprus (438)*

Score is significantly lower than U.S.

#60 *Colombia (399)*

#65 *Peru (373)*

The Programme for International Student Assessment (PISA) is a triennial international study conducted by the OECD to test skill and knowledge of 15-year-old students.

Within the U.S., scores are significantly lower among Black, Latino, and lower-income students

PISA science scores within the U.S., 2012

Early High School

Students in schools with:

<10% eligible for free or reduced lunch (556)

Asian students (546)

White students (528)

U.S. average (497)

Performance by Income

114 points difference

50-74.9% FRL eligible (483)

>75% FRL eligible (442)

Performance by Race

107 points difference

Latino students (462)

Black students (439)

Among high school core subjects, college readiness in science remains the lowest

ACT High School Science Scores, 2014

Percentage of students who met college readiness benchmark scores

- English: 64%
- Reading: 44%
- Math: 43%
- Science: 37%

Benchmark scores by subject	18	22	22	23
	English	Reading	Math	Science

Avg. science scores by race

Score scale: 1-36

Race	Score
Asian	23.2
White	22.1
Latino	18.8
Black	17

Black and Latino students continue to score lower compared to other groups

The student pipeline is broken, resulting in fewer science-related professionals

Shortage of Science-related Graduates

2001
4.01 million 9th Graders

2005
2.8 million High School Graduates

Fall 2005
1.9 million with College Plans

Fall 2005
1.3 million College Ready

278,000 Majoring in STEM

2009-2011
167,000 STEM Graduates
Science education standards are being updated to better prepare students

The **Next Generation Science Standards (NGSS)** is a state-led initiative to develop new K-12 science standards rich in content and practice and arranged in a coherent manner across disciplines and grades to provide internationally benchmarked science education.
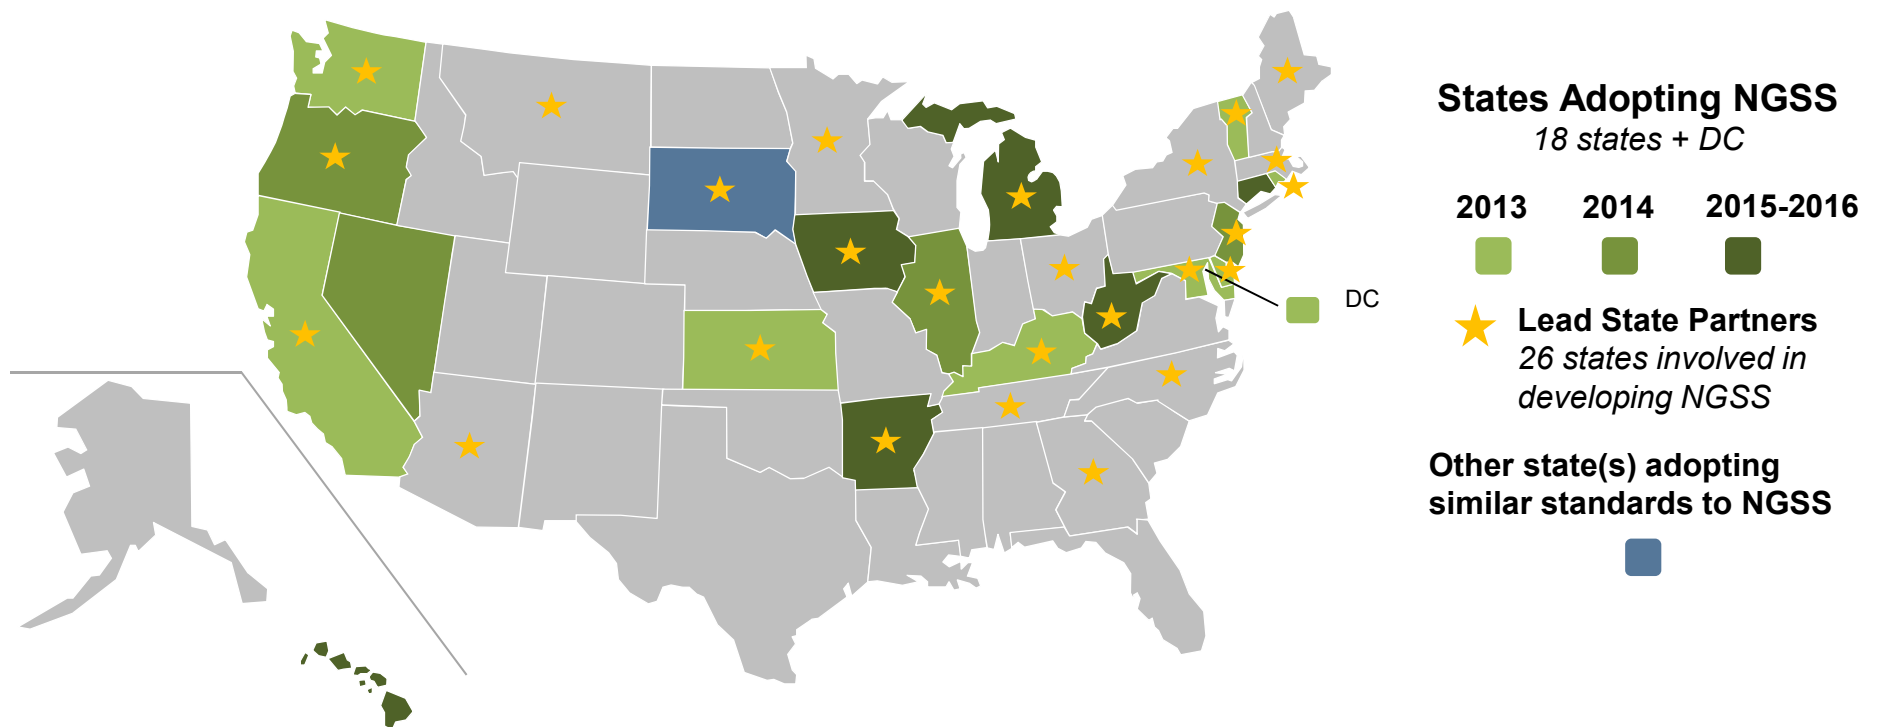

Every NGSS standard has three dimensions:
- disciplinary core ideas (deeper understanding of content)
- scientific and engineering practices (application to the real world)
- crosscutting concepts (interconnectedness of science and engineering)

NGSS progress and adoption has spread, leading other states to update science standards

Science education standards reform

- As of early 2016, 26 states have been involved in NGSS and 18 states have adopted them
- South Dakota has adopted similar state science standards

DC

States Adopting NGSS
18 states + DC

2013   **2014**   **2015-2016**

⭐ **Lead State Partners**
26 states involved in developing NGSS

Other state(s) adopting similar standards to NGSS

Key Takeaways

1 Students are struggling to achieve science mastery throughout K-12

2 Students are not prepared to pursue advanced science courses in college

3 Black and Latino students do not yet perform at the same levels as other racial groups

4 There is a growing U.S. movement for more rigorous science standards

Part III: Opportunities for Ed tech to Support Science Learning

Ed tech tools hold the potential to facilitate and improve science learning

"The only area where we don't have really good content is in science."
- Middle school principal

Teachers value digital tools, but struggle to find effective products

98%

Teachers see **value** of **using technology** for student learning
93%

Teachers **regularly use** some form of **digital tools** to guide instruction

58%

Teachers across all subjects found digital tools to be **effective**

A dearth of effective K-12 science tools to teach standards

Teachers Know Best

BILL & MELINDA GATES *foundation*

Teachers Know Best

What Educators Want from Digital Instructional Tools

http://www.teachersknowbest.org/reports

Excerpt from "Teachers Know Best Report":
Four areas with the greatest deficit of instructional resources that are available, sufficient to teach the standards, and in digital form:

K-5	Elem. English Lang. Arts	
6-8	MS Social Studies	K-12 Science
9-12	HS Math	

Source: Bill & Melinda Gates Foundation, 2014

Teacher needs vary across grade levels

**What teachers want from science digital tools**
Teachers Know Best 2.0 Report, Bill & Melinda Gates Foundation

K-2	• Delivery instruction • Vary delivery method
3-5	• Support student collaboration • Foster independent practice
6-8	• Vary delivery method • Diagnose student learning
9-12	• Support student collaboration • Tailor learning experience

There are fewer science ed tech options than math and language arts

Ed tech companies by subject areas
Number of companies listed on EdSurge Product Index (as of 2016)

Subject	Number
Math	182
Language Arts	156
Science	74
NewSchools asked teachers what they use and seek

What technology/devices do students currently have access to at your school?

- Some teachers have 1:1 student-to-device ratio, while others noted device carts and computer labs
- Chromebooks and iPads were most popular, followed by other Windows laptops

Which science products do you currently use?

- Simulations and YouTube clips were common use cases
- Interactive illustrations and apps were used to explore biological systems
- Some had sophisticated tools (e.g. makerspaces, design)

How do you define quality in regards to edtech tools? What academic/social outcomes are you most interested?

- Student feedback and engagement were among the top qualities teachers sought in tools
- Collaboration is key (teacher and student, student to student)
- Deeper learning and connections to the world

What do teachers see as opportunities to improve science learning?

Introduce content via independent exploration

Integrate with other subjects like design and 21st century skills

Enable – not inhibit – social interaction and connection with the physical/natural environment

For K-5:
Integrate with ELA and Math standards and offer professional development as most teachers are generalists

For 6-8:
Provide teachers with support for deeper inquiry and "exploration of true phenomena"

For 9-12:
Develop more hands-on, project-based content and creating connections to college and careers

Consistent growth in K-12 edtech venture funding is encouraging

NewSchools Ignite launched the Science Learning Challenge to accelerate science innovation

newschoolsignite 🔥

six-month virtual accelerator program

Launched in July 2015, the Science Learning Challenge aimed to:

Empower students and teachers as explorers and creators

Enable new interactions with peers, instructors and the physical world

Leverage connections to other subject areas
Make learning more accessible

Connect content to life beyond school

Ignite students' curiosity to facilitate deeper learning in science

# Science Learning Challenge applicants reflected science ed tech market trends

Challenge winners create hands-on activities and connection to the physical world

ARDUSAT

https://www.ardusat.com/

Ardusat brings space exploration to the classroom by making it possible to run code on satellites orbiting earth.

locorobo

http://www.locorobo.co/

LocoRobo is a digital and scientific literacy company that introduces students to the world of robotics and coding.

LAB4U

http://www.lab4u.co/

Lab4U is developing a set of apps that transform mobile devices into science instruments.

MAKERS EMPIRE

https://www.makersempire.com/

The Makers Empire makes it easy to effectively incorporate 3D design and printing into K-12 classrooms.

MudWatt

http://www.mudwatt.com/

MudWatt engages students in hands-on, inquiry-based STEM learning, using the power of mud!

Challenge winners deliver seamless access to valuable content for teachers and students

https://www.birdbrainscience.com/

BirdBrain Science is an adaptive platform that ensures students can read, grow, and learn independently.

http://noticing.nysci.org/

New York Hall of Science provides iPad apps that support play, design projects, and collaboration.

http://phet.colorado.edu/

The PhET Interactive Simulations provides innovations in teaching, learning, and assessment.

http://www.powermylearning.org/

PowerMyLearning Connect is a free K-12 platform for driving personalized instruction and self-directed learning.

http://www.science-bits.com/en/

Science Bits is a repository of multimedia science lessons designed to fire up your science class.

Challenge winners integrate multiple subjects and make learning more culturally relevant and inclusive

Flocabulary

https://www.flocabulary.com/

Teachers use Flocabulary's hip-hop videos, activities and assessments to engage students.

MOSA MACK SCIENCE

https://www.mosamack.com/

Mosa Mack Science provides engaging supplementary curriculum with animated mysteries and activities.

nepris

http://www.nepris.com/

Nepris connects industry professionals with educators to bring real world relevance.

SCIENCE WITH TOM

http://www.sciencewithtom.com/

Science with Tom features science role models and music videos where students write their own lyrics.

Tuva

https://tuvalabs.com/k12/

Tuva is a data literacy company making statistics and data analysis accessible for learners.

We believe ed tech can positively impact K-12 science learning

TECHNOLOGY

Greater broadband access in schools, lower costs for digital science content, and new, creative solutions will impact how science is taught

INVESTMENTS

K-12 ed tech investments have continued to grow, including greater interest within science, given the priorities to teach students 21st century skills

TEACHER VOICE

Teachers have been vocal in demanding more effective digital tools, creating a clear pathway for science products to address their needs

STANDARDS

The Next Generation Science Standards (NGSS) and similar standards help science companies build streamlined products across the nation
Challenging roadblocks to transforming science education

PRODUCT INTEGRATION

Science products must adhere to school requirements like single sign-on, security and data privacy, and compatibility with existing tools

RESEARCH

Resources and funds to conduct research studies are a huge barrier, but are key for determining the impact on student learning and for engendering educator and investor confidence

SALES PROCESS

Science companies face a fragmented school market with generally long sales cycles

FUNDRAISING

While there may be greater interest, science ed tech funding is at its infancy compared to school operation and other content products
We encourage different stakeholders to build and support science ed tech products

Investors

- Keep abreast of the science education landscape and innovative tools, especially those featured in educational websites and graduates of accelerator programs
- Invest in promising science ed tech products with the goal of supporting scaling efforts

Educators

- Identify primary areas where technology can reduce complexity and time and enhance student learning
- Connect with other educators on effective science tools
- Be open to trying out ed tech tools and offering product feedback
- Advocate for science products that create value and student outcomes

Edtech entrepreneurs

- Examine product offerings with items covered in our market research
- Identify ways to incorporate educator feedback and conduct research studies on the effectiveness of the product
- Determine ways to minimize implementation time/costs and teacher professional development commitments

Key Takeaways

Teachers see benefits to science tools, but struggle to find effective tools

1

Market research shows need for science digital tools

2

NewSchools launched the Science Learning Challenge to spur growth in science

3

Challenge winners are addressing the market gap, but more support is necessary to close it

4
